

Golden Ticket

The golden ratio is based off of the fibonacci sequence. The fibonacci sequence is 1,1,2,3,5,8,13,21,34,55. The symbol for Phi is Φ . An easy way to remember the fibonacci sequence is each time you're adding the current number to the number before that and you get the next number. For example, one plus one is two and then two plus one is three, and you keep doing that and that's how you get the fibonacci sequence. You can find this sequence in many different places for example a sunflower, Mona Lisa, shells, and etc..

One thing that relates to me is that I went back into Soccer and the soccer ball has the golden ratio in it. BuckyBalls is related to phi because it needs phi to become a BuckyBall. A Bucky Ball is a 60 carbon molecule structure that looks like a soccer ball. Another thing that phi relates to is the milky way. I am interested in space and rockets and what ship's we might have in the future.
